

Back-Up Brushes

by Finzer

Multi-wall bag and plastic web manufacturers are rapidly replacing metal Anvil rolls with **Finzer Roller's Back-Up Brushes**. Our latest innovation has completely changed perforating, slitting and cross-hatch scoring of plastic webs and board products.

Back-Up Brush Benefits

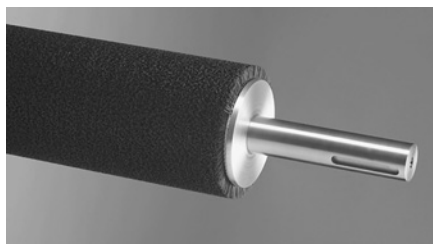

- *Accepts perforating pins or knives*
- *Reduces set-up time, allowing simple tape measure installations*
- *Pins or knives do not damage the bristle*
- *No more fitting or adjusting to match pin and knife points*
- *Misalignment is virtually impossible with free-wheeling back-up brush*
- *Supports board or web*
- *As good and often better than a metal Anvil roll*

Back-Up Brush Features

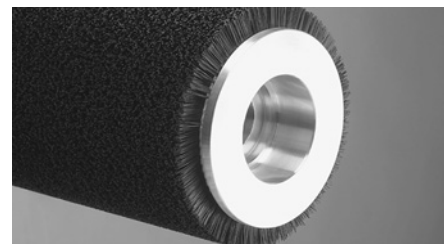

- *Extremely uniform, presenting individual strands of bristle rather than clumps or tufts*
- *Controlled brush density allows unlimited bristle patterns from "open" to "super dense"*
- *Established brush standards for many applications*

Finzer Roller's Back-Up Brushes are now used under craft paper, paperboard, corrugated, paper-plastic laminates, and flexible web products.
