

Scrubber Brushes

by Finzer

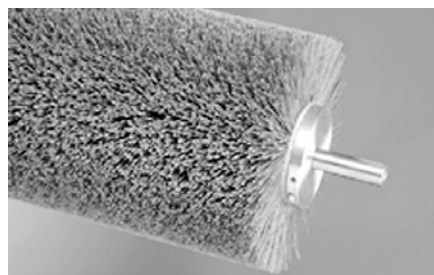

When you need a solution to improve mechanical strip cleaning and surface conditioning in a strip processing, coil coating, metal decorating, electro galvanizing or stainless steel mill application look no further **Finzer Roller's Scrubber Brushes**. Exclusively designed for the metal industry, our strip cleaning brushes offer a wide range of options to suit the most demanding requirements.

Due to the limited nature of caustic solution water sprays, additional surface energy is required to remove carbons, oxides, iron fines, protective oils and dirt from the surface of various steel strip products. Mechanical scrubbing with brushes is the best way to enhance cleaning the strip. Finzer Roller will design and manufacture a **Scrubber Brush** solution that matches each phase of your process.

Scrubber Brush Features and Benefits

- State of the art 'Double Band' brush making technology
- Filaments uniformly fed to outer metal band that is merged to inner band to form continuous strip and helically wound onto the core
- Trimmed and balanced as a complete unit
- Improved brush life with maximum bristle density and retention
- Extensive filament options
 - Abrasive Nylon 46 grit – 1000 grit (Silicon Carbide and Aluminum Oxide)
 - Nylon (type 6:12 and 6:6 Heat Stabilized)
 - Polypropylene (Carbon Steel, Stainless Steel, Brass)
 - Wire (Carbon Steel, Stainless Steel, Brass)

Finzer Roller will help you optimize cleaning performance and brush life by determining the proper bristle type, bristle density, core construction and set up procedures.
