

Solutions for Battery Production

Precision Rollers for Lithium-Ion Manufacturing

Finzer Roller delivers precision roller technologies for **every stage of lithium-ion battery production**. From separator films to electrodes, copper foil, slitting, and assembly, our solutions keep materials moving smoothly, minimize contamination, and maximize efficiency.

Roller Types & Advantages

- **Rubber Covered Rollers:** Gentle contact to protect films and maintain tension, drive or pull. Over 500+ compounds available.
- **Air / Vacuum Rollers:** Non-contact handling for delicate films.
- **Brushes:** Remove dust and debris from films, reducing contamination without surface damage.
- **Concave & Spreader Rollers:** Wrinkle control, lateral tension management and air relief.
- **Expander / Bowed Rollers:** Edge flattening and curl correction.
- **Micro-Groove Rollers:** Grip control, slip prevention, reduces air entrapment.
- **PTFE & Specialty Coated Rollers:** Chemical resistance, non-stick release, temperature resistance, and anti-stick surfaces for clean slitting, traction, and wear/abrasion resistance.
